The first insufflator of its kind to allow intelligent leak-tolerant constant pressure insufflation during laparoscopic, robotic, and endoscopic surgery[1]

EVA15 Intelligent Insufflation and Smoke Evacuation System

The EVA15 insufflator maintains continuous 7-25 mmHg pressure and automatically compensates for leaks and suctioning.

The pedal-activated smoke evacuation system of EVA15 creates a safer operating environment, removing hazardous surgical smoke contaminants before they become airborne in the OR, with its ULPA activated carbon evacuation filter.

EVA15 Intelligent Insufflation and Smoke Evacuation System

ABOUT PALLIARE

Palliare is dedicated to advancing the state of the art in smoke evacuation and insufflation technologies for laparoscopic, endoluminal, endoscopic, colorectal, and robotic surgery.

[1]EVA15 Insufflator has received FDA 510(k) clearance (K193520, K202799, K202922, K222901, and K230474) and CE Mark for use in endoscopic and laparoscopic surgery.

EVA15 PRODUCT FEATURES

Maintains continuous 7-25 mmHg pressure

Insufflator adjusts flow 100 times per second and automatically compensates for leaks, maintaining the surgical field during tool/camera removal, suctioning, and smoke evacuation

On-demand smoke evacuation

Pedal-activated smoke evacuation system removes hazardous surgical smoke contaminants before they become airborne in the OR

ULPA activated carbon evacuation filter (99.9997% efficiency at 0.04 micron)

Allows for controlled end-of-case desufflation

Cavity pressure quickly reduces down to 1mmHg to reduce trocar spray and decrease residual pneumoperitoneum

Works with any standard laparoscopic trocar

Designed for easy integration into any OR setting, seamlessly working with existing machinery and equipment

DESCRIPTION	PART NUMBER
EVA15 Insufflator and Smoke Evacuation System	EVA15
3 line tubeset for laparoscopic insufflation	LAP-300
2 line tubeset for laparoscopic insufflation	LAP-200
